

ACS PARTNER SPOTLIGHT:

Gemini Shippers Group was the first shipper's association formed after the 1984 Shipping Act was passed.

Gemini offers members access to competitive global ocean freight contracts, long term rates, and space allocation with a wide variety of top tier ocean carriers by utilizing collective bargaining power and complete cost transparency. We sign between 15 and 20 ocean carrier contracts annually, providing our 250+ member companies lots of options for rates and service. The member is the consignee and shipments move on the carrier's bill of lading, giving our members a direct relationship with the ocean carrier. We can handle the entire contracting process -including RFP's. The overall volume of Gemini Shippers Group makes it one of the top ten shippers in the United States. This not for profit association has no fee to join and doesn't require a volume commitment. The nominal percontainer dues are incorporated into the rates, so there are no additional costs. Our mission is to aid companies, regardless of size and experience, in navigating the complex environment of transportation procurement.

We partnered with Allport Cargo Services as their systems and service neutral operating model aligns perfectly with ours. Our combined operating capability underpinned by the industry leading supply chain execution platform, Infor Nexus, enables our clients to access a direct, transparent, market competitive end to end service option. We have had a relationship for decades and continue to develop and expand our unique service offering. Our proven working model creates a winning proposition which allows shippers to leverage procurement costs while increasing provider choice and flexibility of Gemini and pair it with the operational excellence of ACS. Gemini will procure rates across a host of providers to create a playbook of price and service options to meet any business requirement. ACS will provide the on-field expertise to quarterback shipments base on conditions on the field, calling the right plays to get the job done.

ACS Partner Spotlight (continued)

Gemini Shippers Group and ACS USA playing together to bring shippers a championship ring.

- Selecting the right players
- Build the playbook, call the right plays with multiple options
- · Execute on the field with a quarterback that is empowered to call an "audible"

Together we have created a clear framework for winning: 1 platform managed by 1 team at origin connected with the same team at destination enabling our clients to select the optimal Gemini partner model/ for every shipment throughout the year without disrupting their information, document and physical product flow.

Key features For Release 19.3

MODULE: REPORT DESIGNER

Modify Report Prompts at the Time of Scheduling

The Report Designer tool is enhanced to modify report prompts at the time of scheduling.

Key Notes:

- Set prompt values on the schedule, so the user need not create multiple reports.
- At the same time, the report schedule list page is upgraded.
- Schedule times are also revised: Users can schedule for a 3-hour window, not a specific time. The system chooses a random time within that 3-hour window.

Business Benefit: Report Designer is upgraded to match existing functionality as Saved Views.

MODULE: MASTER DATA

Enable Emails on Non-Production Environments

We will soon enable emails in non-Production from our main email systems. Previously, our system suppressed emails from non-production environments, such as Preprod and Demo. Before doing so, we will clear any pending emails on these systems, and we will cancel any email subscriptions. Emails from non-production environments will be identified by adding a prefix to the subject of the email indicating the environment from which it was generated.

Note: Certain emails may not be impacted by this change, including Saved Views and email notifications from Supply Chain Visibility and Transportation Management products.

Business Benefit: Ability to create users in the testing environments will be faster to engage, enabling testing of new functionality and deployment of new customer changes will be faster.

Key features For Release 19.3

MODULE: LIVE OCEAN

Enhancements Made to Current Vessel Details in Layouts and Advanced Search

The Current Vessel field was created to be used as the tracking element for the Live Ocean solution. The algorithm is stated below:

- 1. If there is just Vessel 1 and no, Vessel 2 -- Current Vessel: Vessel 1
- If there is just Vessel 2 and no, Vessel 1 -- > Current Vessel: Vessel 2
- 3. If both are populated, then we review the event code to determine which Vessel to track.

As a part of this release, users can now access Current Vessel information from the following areas: Layouts, Advanced Search, and Classic Shipment Detail Page

	iew Shipments

Business Benefit: Users can now report on Current Vessel. Now if there are multiple vessels for a container, the user can easily see which vessel the container is on.

MODULE: SHIPPING ORDER

New Reporting Around Doc Event Types Against Shipping Order

Previously, when documents posted to a Shipping Order, milestones were posted against the Purchase Order line. In addition, the 2nd milestone overwrote the 1st milestone.

Now, users can now create reports on the doc event types posted against a Shipping Order from the new fields available under the Orders -Transportation Execution layout:

Configure Layout For View Orders				
Select "View by" Data Level				
he data level you select will change the "Fie	lds in Layout" you can select below.

Business Benefit: Documents milestones are now accurately reflected in the application

Shipping Order Key Bug Fixes

Issue: Ship To party was not carried over from the Purchase Order during Shipment creation.

Fix: Ship To party is now carried over from the Purchase Order during Shipment creation.

Product Spotlight-InforNexus Mobile

Why Mobile?

- Monitor and manage your supply chain from anywhere, at anytime
- Stay on top of shipment status updates & important milestones
- Access and exchange vital files with trading partners

4 Pillars of Mobile:

- Intuitive (Simple repeated patterns to circumvent the need for mobile specific training)
- Proactive (Serve and highlight key information to decrease search costs)
- Continuity (Empower users to remain productive while away from their PC)
- Opportunistic (Leverage device utilities such as location awareness, access to cloud data storage, push notifications, and camera)

Product Spotlight-InforNexus Mobile

Key Features:

Data

- High-level view of product status with a drill down to transactional details
- Collaborate with partners in the resolution of Business Issues
- View header and item information on:
- Orders, Invoices, Shipping Orders, Packing Lists and Shipments

Act

- Confirm/Decline Orders
- Enter Milestones against shipments
- Resolve issues or route to other parties
- Share with trading partners
- Generate and send PDFs of transactions
- Add files from your device or file storage providers to transactions

Display

 Users can enable push notifications similar to other mobile applications (email, weather, etc)

Access

- Available in Apple App store, Google Play Store & Tencent app store for users in China
- Users in at least 40 countries Most of the users on Mobile are outside of the US (Overseas vendors and factories).

Security

- Log in swiftly with Touch ID or Face ID
- Mobile E-ID for Two Factor Authentication supported
- Single Sign-On supported

What's Coming

19.4 ENHANCEMENTS NOW IN TESTING*

- Shipment Plan: Generate CI and PL Documents based on SO Load Details
- Shipment Plan: Creating Shipment Plans via integration and linking to Shipping Orders
- Shipment Plan: Reassign SP lines from one SP to other SP
- * Above enhancements will be confirmed for release 19.4 by end of June.

NEW PRODUCT TIMELINE - UPDATED

Live Exceptions: Visual display (red, yellow, green) within the live product of on-time or delayed ETAs **Live Road**: Provides real-time geo-mapping of intermodal moves and creates GPS tracking of the last mile, an ACS value added service

Live Air: Utilizing Flight Tracking Data to provide real-time geo-mapping, an ACS value added service Watch Tower: Graphical representation of product delivery timeline – estimated versus actual Home Pages: Graphics and reports representing business processes for high level analytics Widgets: High level view o operators inbound supply chain flow, highlighting exception workflow Issue Management: Collaborative platform for resolution of identified business issues affecting product delivery

Predictive ETA: Auto generated model based on machine learning and statistical analysis **SO Modernization:** Enhanced version to the shipping order module, focusing on operational efficiency and look/feel, including grid-like functionality

For any further information on the above new product rollouts, please contact your ACS representative.
